

IN THE CLAIMS:

1. (Currently Amended) An expandable container-like housing structure (1) comprising a main module, which includes a door (7), and at least one expansion module (E₁) that includes a number of structural segments, such as a roof part 21 firmly connected to a first wall part (13), a floor part (11), and two second wall parts (33), wherein when expanding the expansion module the floor part (11) is intended to swing out about a horizontal axle (12) at floor level, whereafter the first wall part (13) together with the roof part (21) are intended to be projected out telescopically from the main module, ~~characterised in that~~ wherein at least one second wall part (33) is mounted for rotation about a vertical axle (35) so that said second wall part (33) will be swung out to form an additional wall to the expansion module (E₁) subsequent to having projected out the roof part (21) and the first wall part (13).

2. (Currently Amended) A housing structure according to Claim 1, ~~characterised in that~~ wherein the vertical axle (35) is connected to the first wall part (13).

3. (Currently Amended) A housing structure according to ~~any one of Claims 1-2,~~ claim 1, wherein the second wall part (33) ~~is provided with~~ includes locking means for fixation to connecting structural segments of the expansion module and/or the main module.

4. (Currently Amended) A housing structure according to ~~any one of Claims 1-3,~~ claim 1, wherein the second wall part

~~(33)~~ includes a pneumatic sealing element ~~(61)~~ along at least one of its edges edge thereof.

5. (Currently Amended) A housing structure according to Claim 4, characterised in that wherein the sealing element ~~(61)~~ includes an air valve ~~(65)~~ which is adapted for expansion with the aid of air to provide sealing abutment with connecting structural segments.

6. (Currently Amended) A housing structure according to Claim 5, characterised in that wherein the sealing element ~~(61)~~ is placed in a profile rail ~~(75)~~ which, in turn, is fitted to the edge of the second wall part ~~(33)~~.

7. (Currently Amended) A housing structure according to Claim 6, characterised in that wherein the sealing element ~~(61)~~ extends completely around the second wall part ~~(33)~~.

8. (Currently Amended) A housing structure according to ~~any one of Claims 1-7~~, characterised in that claim 1, wherein the door ~~(7)~~ is located in the main module in a wall plane that extends parallel with the direction of movement of the expansion module (E_1).
